

Requests for Radiologist:

- STAT report
- Clinician's Cell for after hour STAT: _____
- CC Report to: _____
- Provide Images: CD Film

Name _____ Date of Birth _____

Home Phone _____ Cell Phone _____

Referring Clinician _____

Phone _____ Fax _____

Clinician Signature _____

History, Symptoms, Reason for Exam:

3T MRI

Abdomen

- Adrenal
- Kidney
- Liver
- MRCP
- Pancreas
- Other: _____

Ankle

Athletic Pubalgia (Sports Hernia)

Brain

- IACs
- Neuroquant®
- Pituitary
- Orbits
- Temporal Lobes/Seizures
- TMJ
- Face
- Sinuses (Paranasal)

Chest

- Brachial Plexus
- Pectoralis Major
- Other: _____

Elbow

Finger: _____

Foot

- Hindfoot
- Midfoot
- Forefoot

Hand

Hip

Knee

- Biomet

Soft Tissue Neck

Pelvis

- Musculoskeletal
- Female G/U

W & W/O Contrast
W/O Contrast
Right Left

3T MRI (continued)

Prostate MRI w/3D Rendering

Sacrum / Coccyx

Shoulder

Spine

- Cervical
- Thoracic
- Lumbar

Thigh

Tibia and Fibula

Wrist

Other: _____

W & W/O Contrast
W/O Contrast
Right Left

MR Angiography

Contrast as indicated

Aorta Thoracic Abdominal

Neck w/ (Carotids)

Head w/o (Cerebral)

Pelvis with Lower extremity run-off

MR Venography: _____

Other: _____

With Contrast
W/O Contrast

MR Arthrogram

Ankle

Elbow

Hip

Knee

Shoulder

Wrist

If saline arthrogram is desired

Right Left

CT

Contrast as indicated
3D Rendering as indicated

W & W/O Contrast
W/O Contrast
With Only

Abdomen (Pelvis if indicated)

Abdomen and Pelvis

- Stone Protocol
- Urogram / IVP Protocol
- _____

Brain

- IAC / Temporal Bone
- Orbits
- Sinus (Maxillofacial)
- Facial Bones

Chest

Extremity: Right Left Specify: _____

Lung Cancer Screening

Soft Tissue Neck

Pelvis Bony Soft Tissue

Spine

- Cervical Thoracic Lumbar

CTA: Body Part _____

Other: _____

X-Ray

Abdomen: Supine & Upright

Abdomen: AP (KUB)

Cervical: Upright Routine (5 views) 5 views plus flexion & extension Only AP and Lat

Chest: Routine (2 views) Only PA

Extremity: _____

Head Orbits Sinuses (Paranasal) Skull

Knee: Standing Supine Routine (2 views) 3 views

Lumbar: Supine Upright Routine (5 views) 5 views plus flexion & extension Only AP and Lat

Pelvis: AP

Ribs (with PA Chest)

Scoliosis Study

Thoracic Spine: Supine Upright

Other: _____

Right Left

For All Patients

- If you've had a prior image taken of the body part we are scanning, please bring it with you to your appointment (preferably on CD).
- If possible, wear clothing without metal (such as, metal underwire, athletic wear, etc.).
- Women of childbearing age, let our staff know if there is any chance you may be pregnant or if you're breastfeeding.
- Arrive 15 minutes prior to your scheduled appointment to complete the paperwork.
- Bring your exam order, your insurance card(s), and photo identification.

How to Prepare for your MRI

- Abdomen or Pelvis (Female G/U, Male Prostate) MRI: fast for 4 hours prior.
- MRI with contrast: Patients receiving kidney dialysis cannot be administered contrast. Please alert our staff if you are receiving dialysis.
- Let our staff know in advance if you have a pacemaker, non-coronary stent, prosthesis, surgical clips, metal implants, or any other metal objects in your body. Some implants can negatively affect an MRI exam. You are not permitted to enter the MRI room if you have a pacemaker.
- Let our staff know if you work or have worked around metal finishing or grinding equipment. This is particularly important if you have had metal particles get into or removed from your eyes. You will need an Orbital X-ray to make sure no metal fragments are near your eyes prior to your MRI exam.
- Prostate MRI: Patients must avoid sexual intercourse for 48 hours. Please fast starting the morning of the exam, and only have clear liquids from noon the day before. Please purchase a Fleet enema (Available at all pharmacies; no prescription is needed, and can be found in the laxative section of the pharmacy), and administer it the evening before the MRI study. Plan to arrive 45 minutes prior to the exam to allow time for completely emptying of the bowels.

How to Prepare for your CT

- Depending on the part of the body being scanned, you may have oral or IV contrast. There may be additional preparations for your CT as well. Our Patient Coordinators will discuss the preparations at the time you schedule your appointment.

IV Contrast CT Patients with one or more of the following risk factors must have their creatinine checked no more than 6 weeks before the exam.

- Age 65 years old or greater
- History of renal disease, solitary kidney, kidney transplant or kidney tumor
- History of severe liver disease, liver transplant or pending liver transplant
- Diabetes treated with insulin or other medications
- High-blood pressure that is not controlled by medication
